

# Applewood Heights Garbage Receptacle Screening Guidance

Each receptacle is approximately 30" wide by 36" deep by 44" tall inches.

Below are ACC guidelines for adding screening if you are going to be storing the bins outside.

1. Installed at or behind the front corner of the house.
2. Dimensions: no greater than 4.5' wide by 9' long, with height between 4.5' - 6'.
3. Durable outdoor grade, painted or stained materials that complement the house exterior and/or existing fence.
4. Gaps between materials should be no greater than ½" to prevent seeing the enclosed bins.
5. Gap between lower panels and ground to be no more than 4 inches to allow for drainage.
6. Bins should not be visible from any side.
7. No top/lid.
8. Screening with vegetation may be in addition to, but not a substitute for a screen.

**NOTE: Example pictures show vinyl fencing for shape/size/location only.**

**Vinyl fencing is not currently pre-approved by the ACC.**
